AN/"Illumio, Inc"

PAT. NO.**Title**

- 1 [11,303,605](#)  [Domain name based visibility and policy enforcement in a segmented network environment](#)
- 2 [11,223,643](#)  [Managing a segmentation policy based on attack pattern detection](#)
- 3 [11,171,991](#)  [Automatically assigning labels to workloads while maintaining security boundaries](#)
- 4 [11,121,875](#)  [Enforcing a segmentation policy using cryptographic proof of identity.](#)
- 5 [11,095,611](#)  [Traffic visibility and segmentation policy enforcement for workloads in different address spaces](#)
- 6 [11,075,937](#)  [Generating a segmentation policy based on vulnerabilities](#)
- 7 [11,075,936](#)  [Generating vulnerability exposure scores in a segmented computing environment](#)
- 8 [11,012,310](#)  [Managing containers based on pairing keys in a segmented network environment](#)
- 9 [10,965,648](#)  [Enforcing instructions of a segmentation policy on a network midpoint device](#)
- 10 [10,958,545](#)  [Monitoring traffic flows of containers in a segmented network environment](#)
- 11 [10,924,355](#)  [Handling changes in a distributed network management system that uses a logical multi-dimensional label-based policy model](#)
- 12 [10,917,309](#)  [Distributed network management using a logical multi-dimensional label-based policy model](#)
- 13 [10,897,403](#)  [Distributed network management using a logical multi-dimensional label-based policy model](#)
- 14 [10,819,590](#)  [End-to-end policy enforcement in the presence of a traffic midpoint device](#)

- 15 [10,805,166](#)  [Infrastructure-agnostic network-level visibility and policy enforcement for containers](#)
 - 16 [10,785,115](#)  [Allocating enforcement of a segmentation policy between host and network devices](#)
 - 17 [10,728,109](#)  [Hierarchical navigation through network flow data](#)
 - 18 [10,701,090](#)  [Distributed network security using a logical multi-dimensional label-based policy model](#)
 - 19 [10,693,718](#)  [Updating management instructions for bound services in a distributed network management system](#)
 - 20 [10,608,945](#)  [Creating rules for labeled servers in a distributed network management system](#)
 - 21 [10,476,745](#)  [Infrastructure-agnostic network-level visibility and policy enforcement for containers](#)
 - 22 [10,326,650](#)  [Enforcing rules for bound services in a distributed network management system that uses a label-based policy model](#)
 - 23 [10,320,617](#)  [Representation of servers in a distributed network information management system for efficient aggregation of information](#)
 - 24 [10,277,460](#)  [Updating management instructions for bound services in a distributed network management system](#)
 - 25 [10,212,191](#)  [Automated generation of access control rules for use in a distributed network management system that uses a label-based policy model](#)
 - 26 [10,148,511](#)  [Managing servers based on pairing keys to implement an administrative domain-wide policy](#)
 - 27 [9,942,102](#)  [Handling changes in a distributed network management system that uses a logical multi-dimensional label-based policy model](#)
 - 28 [9,923,928](#)  [Automated generation of access control rules for use in a distributed network management system that uses a label-based policy model](#)
 - 29 [9,912,554](#)  [End-to-end policy enforcement in the presence of a traffic midpoint device](#)
 - 30 [9,882,919](#)  [Distributed network security using a logical multi-dimensional label-based policy model](#)
 - 31 [9,882,783](#)  [Distributed network management using a logical multi-dimensional label-based policy model](#)
 - 32 [9,553,768](#)  [Determining, without using a network, whether a firewall will block a particular network packet](#)
 - 33 [9,509,574](#)  [End-to-end policy enforcement in the presence of a traffic midpoint device](#)
 - 34 [9,485,279](#)  [Automated generation of access control rules for use in a distributed network management system that uses a label-based policy model](#)
 - 35 [9,397,892](#)  [Managing servers based on pairing keys to implement an administrative domain-wide policy](#)
