Company Profile

The key to success for any venture is the joining of hands to work together for a singular cause. That's the sole reason why we adapt to your business needs and become A part of you. Because collectively we can always achieve more and pen down stories which become milestones for the industry and economy at large.

SGC Services believes that it is this special partnership which leads to a thriving business formula. Saying so, the company maintains a relationship which makes it a part of any business that it has vested interest in. Being a part of you, is not just another phrase in our books. It is a way of life at SGC and the foundation of all its services.

THE COMPANY

SGC Services has been a major player since 1992, in providing quality HRO services to leading companies and being a partner in their growth. We have innovated ourselves with the change in time and kept up with technology which brings about a sea-change in the services that we provide. But what we have always kept as an upper hand, is the personalization and commitment to the best service standards for our clients.

THE PURPOSE

The reason why you should be considering us as a partner is quite transparent. One, we take full responsibility of the services we are into, and two, we lay out specific turnaround times against which our performance can be measured to see the difference it brings to any organisation.

Also, we have had a history of successful collaborations which speak more than words can stress on. Our clientele has always got the benefit of an unmatched service, coupled with the promise of bringing peace of mind to the chaos that springs up while the business is on its way to newer goals.

THE BLUEPRINT

SGC Services plays a gamut of roles. It brings under one roof facilities related to

Payroll outsourcing

Employee Benefit Management

Labour Law Compliance

Human Resource Information System

Corporate Services

Outsource Manpower/Temp Staffing

Being a partner more than a supplier to any organisation, we believe it's of umpteen importance to keep the data fully confidential and error free. That's the reason we use technology which is fully automated and there is limited human intervention in keeping the records updated. A consolidated mapping of the information can be done to provide a report in the form of aggregated statistics which is also a completely automated process.
